- Managing app states (Redux)
- Testing apps (Jest, Chai, Mocca)
- How to work in IT team
- Any language and libraries to work with project in job

LANGUAGES

- **Polish** - Native
- **English** - Fluent

WHO AM I?

Hi! I'm a self-taught programmer looking for an entry-level job in the IT world :) I don't want to talk too much about my skills, certificates, and finished courses. Instead, I would like to focus on my soft skills, to prove that I'm the right person for your team!

My friends always say that I'm friendly, open, and easygoing. My key to being this kind of person is to focus on listening to others. I highly value communication skills. I understand that effectively conveying information to others is crucial in any job. Therefore, I have always been a person who others relied on and trusted with given tasks.

At work, I always admired people who knew more than me and loved learning from them. Also, I'm excellent at sharing this knowledge because of my patience and high empathy.

WHO I WAS?

Production Worker, Fingerbau sp. z.o.o Oświęcim

April 2017 - September 2022
- Participated in training new employees
- Helped manage a team responsible for timely shipments

Warehouse Worker, Syncreon, Waalwijk - Netherlands

October 2022 - January 2023
- Communicated mostly in English
- Took on additional responsibilities to ensure smooth shipment dispatching

WHAT I'AM CURRENTLY WORKING ON?

Reed - personal library web application
This is the app I spend the most time with recently. It uses Google Books API. Users can find, add, and rate books that they read. I worked on this project with my friends - one of them is an experienced software developer, who pointed out some bugs, and mistakes and reviewed my code. Another is a UI/UX designer who created a mockup in Figma that I used for inspiration. Check the links below! To see the app in full potential add at least 10 books :)
